

Crazy Cash Cow Finance

Whitepaper V1.0

Introduction

Crazy Cash Cow Finance is made by a crazy Swedish crypto believer that thinks the space lacks an innovative way to create more value for both the people of the world and help people in the understanding of men's mental health.

Crazy Cash Cow Finance is about creating something that adds value in synergy to those problems. Together with the power of smart contracts we think it's possible for us to find a way where \$CCCF could be seen as an investment tool and at the same time a way of creating tools for people to understand the overall stigma around men's mental health and create a way to support it.

About Us

Crazy Cash Cow Finance is a purpose and community driven DeFi project. \$CCCF strongly believes that using smart contracts with a strong concept in an exciting space will make a huge difference.

We need help!

We can only succeed if we can gather a large community of fellow thinkers who understand that it's not only about you or me, it's about us all coming together that will be the solution! You who believe in this also know that we can grow strong and create changes for real if we stick together. We talk to you as an investor, we do not demand much, just your support for our cause!

Tokenomics

Crazy Cash Cow Finance will also be used as a hyper-deflationary asset that will have its initial liquidity locked through Medusa. By implementing a different buy and sell tax we can also tax sellers harder to bring more value for holders, marketing and our buyback system.

Buy

- 1% go to the buyback tax.
- 4% goes to the holders as \$BNB, proportionally split between the holdings of the wallets.
- 2% go towards the marketing wallet.

Sell

- 3% go towards the buyback tax
- 6% goes to holders as \$BNB, proportionally split between holdings of the wallets.
- 3% go towards the marketing wallet.

So not only would Crazy Cash Cow Finance work as a token with focus on men's mental health, but at the same time the holders would get rewarded over time for holding.

What is the buyback exactly?

The buyback function of \$CCCF aka The Crazy Train is funded by our buyback tax which will act as a strategic hyper-deflationary function.

The tokens that gets collected towards The Crazy Train from the Buyback tax will be converted to BNB and stored in BigSwedes deployed contract address. The contract is coded in such a way that the BNB can not leave the contract in any other way than through the buyback function being activated, which means that the only thing those funds could be used is through The Crazy Train.. When The Crazy Train is released it will buy back all tokens from sells happening from the time the buyback is activated and sending them straight to the burn address. By doing this Crazy Cash Cow Finance will also give back value to all holders of \$CCCF by increasing the value per token each time the buyback function would be called. Once the tokens are bought back they the new BNB amount is added to the liquidity pool.

Maxwallet and maxTX

We believe that to make the project a success in regards to a steady liquidity we would need to add in a few functions that would help the contract stop anyone trying to destroy our mission. By implementing functions such as MaxWallet and MaxTX we could create a way that a wallet won't have the ability to purchase more than a total of 6% of the supply and not be able to sell more than 2% of the supply. Since the maxwallet function exists no wallet could hold over 6% of the total tokens.

Q1 -

- ~~Idea creation~~
- ~~White paper creation~~
- Initial Liquidity gathering
- Marketing plan for the launch

Q2 -

- CG Application
- Coinmarketcap application
- Expanding the team.
- 500 Telegram members
- First donation towards men's mental health

Q3 -

- Partnership with organizations
- TBA
